An overview

TRENDS

“Numbers represent search interest relative to the highest point on the chart for the given region and time.

- A value of 100 is the peak popularity for the term;
- A value of 50 means that the term is half as popular;
- A score of 0 means there was not enough data for this term.”

TOP USES

Artificial intelligence is a branch of computer science which focuses on automation of intelligent behavior.

SOME DEFINITIONS CAN BE CATEGORIZED INTO FOUR FRAMES.

Artificial intelligence is a branch of computer science which focuses on automation of intelligent behavior.

SOME DEFINITIONS CAN BE CATEGORIZED INTO FOUR FRAMES.

SYSTEMS THAT THINK LIKE HUMANS

[Bel78]

“[The automation of] activities that we associate with human thinking, activities such as decision-making, problem-solving, learning...”

Bellman, R. E. *An Introduction to Artificial Intelligence: Can Computers Think?* **Boyd & Fraser Publishing Company.**

[Hau89]

“The exciting new effort to make computers think[...] *machines with minds*, in the full and literal sense”

Haugeland, J. (1989). *Artificial Intelligence: The Very Idea*. **A Bradford book. MIT Press.**

SYSTEMS THAT THINK RATIONALLY

[CMM85]

“The study of mental faculties through the use of computational models.”

Charniak, E., McDermott, D., and McDermott, D. V. (1985). *Introduction to Artificial Intelligence*. Addison-Wesley series in computer science and information processing. Addison-Wesley.

[Win92]

“The study of the computations that make it possible to perceive, reason, and act.”

Winston, P. H. (1992). *Artificial Intelligence*. A-W Series in Computer Science. Addison-Wesley Publishing Company.

SYSTEMS THAT ACT LIKE HUMANS

[Kur92]

“The art of creating machines that perform functions that require intelligence when performed by people.”

Kurzweil, R. (1992). *The Age of Intelligent Machines*. **Viking**.

[RK91]

“The study of how to make computers do things at which, at the moment, people are better.”

THOUGHT-PROVOKING QUESTIONS

How to achieve intelligence on a computer system

What do we mean by “Intelligence”?

- ➡ Single faculty or gathering of abilities
- ➡ Learned or existing
- ➡ What happens when we learn
- ➡ Are creativity and intuition measurable
- ➡ Does observable behavior infer to intelligence
- ➡ How knowledge is routed in the human brain

THOUGHT-PROVOKING QUESTIONS

How to achieve intelligence on a computer system

CONTINUOUS INTEGRATION (CI)

The screenshot shows a web browser window displaying the Docker Hub repository for 'abmhamdi/jlai'. The browser's address bar shows the URL 'hub.docker.com/r/abmhamdi/jlai'. The Docker Hub interface includes a search bar, navigation links for 'Explore', 'Repositories', 'Organizations', and 'Help', and a user profile for 'abmhamdi'. The repository page features a blue cube icon, the name 'abmhamdi/jlai' with a star, and a 'Manage Repository' button. It indicates the repository was updated 21 hours ago by 'abmhamdi' and is associated with 'Artificial Intelligence Labs @ ISETBZ'. The 'Overview' tab is selected, showing a description: 'Fuzzy Logic, Machine Learning and Deep Learning with Julia'. It states that the repository contains slides, labs, and code examples for using Julia to implement artificial intelligence algorithms, running on a Docker image for a consistent and reproducible environment. A status bar shows 'jlai-ci' as 'passing', with 'version latest', 'docker pulls 22', and 'docker stars 0'. A 'Docker Pull Command' box displays the command 'docker pull abmhamdi/jlai'. At the bottom, it instructs users to pull the Docker image by running a command.

Fuzzy Logic, Machine Learning and Deep Learning with Julia

This repository contains slides, labs and code examples for using `Julia` to implement some artificial intelligence related algorithms. Codes run on top of a `Docker` image, ensuring a consistent and reproducible environment.

`jlai-ci` passing version `latest` docker pulls `22` docker stars `0`

To run the code, you will need to first pull the `Docker` image by running the following command:

Docker Pull Command

```
docker pull abmhamdi/jlai
```

<https://hub.docker.com/r/abmhamdi/jlai>

Fuzzy Logic

WHAT IS FUZZY LOGIC?

“There are many misconceptions about fuzzy logic. To begin with, fuzzy logic is not fuzzy. Basically, fuzzy logic is a precise logic of imprecision. [...] fuzzy logic is designed to deal with imperfect information. Imperfect information is information which in one or more aspects is imprecise, uncertain, incomplete, unreliable, vague or partially true. In the real world, such information is the norm rather than exception.”

Lotfi Zadeh, WCECS 2014

“ Fuzzy Logic, in computer science, is a form of logic used in some expert systems and other artificial-intelligence applications in which variables can have degrees of truthfulness or falsehood represented by a range of values between 1 (true) and 0 (false). With fuzzy logic, the outcome of an operation can be expressed as a probability rather than as a certainty. For example, in addition to being either true or false, an outcome might have such meanings as probably true, possibly true, possibly false, and probably false.”

Fuzzy Logic, Microsoft® Encarta® Online Encyclopedia 2009

https://www.refseek.com/data/cache/en/1/Fuzzy_Logic.html

WHAT DOES FUZZY LOGIC HAVE TO OFFER?

Fuzzy Logic aims at formalizing/mechanizing two noticeable human capabilities:

1. communicating, reasoning and rational decision making
(in presence of imprecision, uncertainty & partiality of truth)
2. performing a wide variety of tasks
(w/o measurements or computations)

FUZZY LOGIC AS AN EXTENSION OF THE BOOLEAN LOGIC

Boolean Logic

Fuzzy Logic

Continuous \rightarrow Quantized \rightarrow Granulated

EXAMPLE OF A FUZZY CONTROL SYSTEM

ARCHITECTURE

Rule Base is provided by experts. It contains the set of rules to govern the decision making.

Fuzzification converts crisp numbers to fuzzy sets.

Inference Engine decides which rules to be fired matching degree of the current fuzzy inputs.

Defuzzification converts the fuzzy sets delivered by the inference engine into some crisp value

DEFUZZIFICATION

A fuzzy value can be defuzzified through multiple ways.

1. Center of Sums
2. Centroid Method
3. Center of Area
4. Weighted Average Method
5. Max-Membership Principal

LOGICAL SYMBOLS

In formal logic \neg is NOT, \vee is **OR** and \wedge is **AND**

Consider the following propositions \mathcal{E} and \mathcal{S}

\mathcal{E} "The earth is round"

\mathcal{S} "The sun spins on its axis"

Thus

$\neg \mathcal{E}$ "The earth is not round"

$\neg \mathcal{S}$ "The sun does not spin on its axis"

$\mathcal{E} \vee \mathcal{S}$ "The earth is round **or** the sun spins on its axis"

$\mathcal{E} \wedge \mathcal{S}$ "The earth is round **and** the sun spins on its axis"

$\neg \mathcal{E} \vee \mathcal{S}$ "The earth is not round **or** the sun spins on its axis"

$\mathcal{E} \wedge \neg \mathcal{S}$ "The earth is round **and** the sun does not spin on its axis"

Tipping Problem

What should be the TIP at a restaurant, given the quality of FOOD and of SERVICE. These latter are represented by some scores ranging from 0 (*poor*) to 10 (*excellent*).

Rules Base

1. FOOD is rancid \vee SERVICE is poor \implies TIP is cheap;
2. SERVICE is good \implies TIP is average;
3. FOOD is delicious \vee SERVICE is excellent \implies TIP is generous.

Tipping Problem

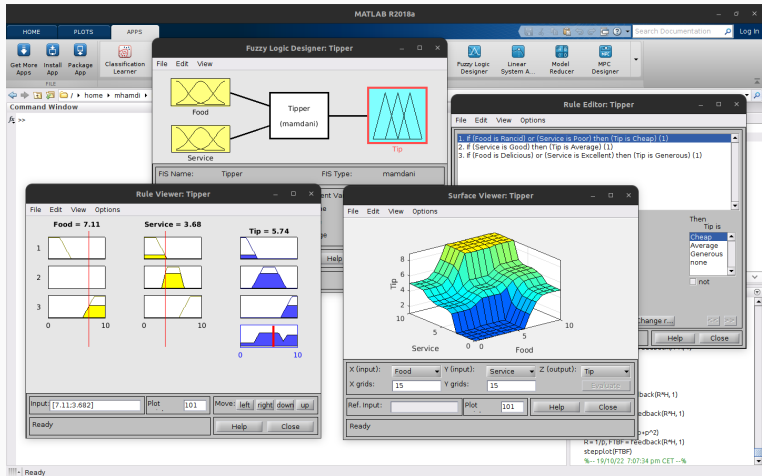

What should be the TIP at a restaurant, given the quality of FOOD and of SERVICE. These latter are represented by some scores ranging from 0 (*poor*) to 10 (*excellent*).

Rules Base

1. FOOD is rancid \vee SERVICE is poor \implies TIP is cheap;
2. SERVICE is good \implies TIP is average;
3. FOOD is delicious \vee SERVICE is excellent \implies TIP is generous.

USING FUZZY LOGIC TOOLBOX

 → Matlab → Fuzzy → Tipper.fis

USING FUZZY.JL PACKAGE

Code is available at <https://github.com/a-mhamdi/jjai>

→ Codes → Julia → Part-1 → tipper.jl

FUZZY NUMBERS (1/6)

★ Represent imprecise numbers: number & linguistic modifier (*e.g., nearly, around, etc.*)

- ▶ approximately five kilos
- ▶ about 12 pm

★ Play an important role in decision making, approximate reasoning, statistics with imprecise probabilities and fuzzy control.

We need to perform arithmetic operations on fuzzy numbers (*e.g., calculate a ratio of some fuzzy output over some fuzzy input*)

“around 20”

- ▶ includes some number values on either side of the central value of 20
- ▶ Central value is fully compatible with concept
- ▶ Number around central value are compatible with it to lesser degrees
- ▶ Degree of compatibility represented by fuzzy set; Membership value decreases from 1.0 to 0.0 on both sides of central value = fuzzy number.

FUZZY NUMBERS (2/6)

FUZZY NUMBERS (3/6)

For a fuzzy membership function to qualify as a fuzzy number, it must capture our intuitive concept of a set of numbers around a given real number or interval of real numbers

$$\mathcal{A}(x) = \begin{cases} f(x) & \text{for } x \in [a, b] \\ 1 & \text{for } x \in [b, c] \\ g(x) & \text{for } x \in [c, d] \\ 0 & \text{for } x < a \text{ or } x > d \end{cases} \quad (1)$$

Common shapes of Fuzzy Numbers

- ▶ Most common membership functions are trapezoidal and triangular (*easy to construct and manipulate*)
- ▶ Choice of a, b, c and d is important and is highly context-dependant
- ▶ Most applications not significantly affected by shapes of functions (*i.e., use linear shapes*)
- ▶ When some of real numbers (a, b, c, d) are equal, get degenerated forms of fuzzy numbers

FUZZY NUMBERS (4/6)

FUZZY NUMBERS (5/6)

States are fuzzy numbers which represent linguistic concepts

FUZZY NUMBERS (6/6)

1. Fuzzy numbers are normal fuzzy sets (height=1)
2. Fuzzy numbers are convex fuzzy sets
3. Support of every fuzzy number is open interval (a, d) of real numbers (support must be bounded)
4. Interval analysis can be used to define arithmetic operations on fuzzy numbers

Basic arithmetic operations:

- ▶ addition $[a, b] + [c, d] = [a + c, b + d]$
- ▶ Subtraction $[a, b] - [c, d] = [a - d, b - c]$
- ▶ Multiplication $[a, b] \times [c, d] = [\min(ac, ad, bc, bd), \max(ac, ad, bc, bd)]$
- ▶ Division¹ $[a, b] \div [c, d] = [a, b] \times [1/c, 1/d]$

¹Interval division assumes that the number 0 is not one of the elements in the divisor interval [c, d].

CONSTRUCTING FUZZY SETS (1/5)

HOW WOULD YOU ASSESS TODAY'S TEMPERATURE?

We can describe a parameter describing a phenomena (*e.g.*, *Temperature for environment or Error for distance measurement*) using a finite, small number of descriptors, referred to as linguistic variables of parameter.

Temperature (T) {Cold, Average, Warm}

Error (E) {Small, Medium, Large}

The number of linguistic variables should be kept small (7 ± 2) due to our limited capacity to distinguish more. Commonly 3 to 5 linguistics variables are used in describing parameters.

CONSTRUCTING FUZZY SETS (2/5)

FUZZY SETS → MEMBERSHIP FUNCTIONS

- ▶ Fuzzy sets offer an important and unique approach to describe linguistic variables
- ▶ Membership functions

$$\mathcal{A}(x) = \mathcal{X} \rightarrow [0, 1]$$

are mathematical functions that are used to describe fuzzy sets

- ▶ Choosing membership functions require understanding of:
 - nature of the problem and parameter at hand
 - Level of details to be captured
 - Context of application

Prerequisites

- ▶ Concepts and linguistic values (*e.g., cold temperature*)
- ▶ Numerical measurements and/or linguistic assessments (*e.g., degrees Celsius*)
- ▶ Given context
- ▶ Data or Expert

CONSTRUCTING FUZZY SETS (3/5)

To construct fuzzy sets:

Expert-Driven Using developer, user, decision-maker, etc.

1. Direct methods

- Answers to questions that explicitly pertain to the constructed membership function
- Single or multiple experts

2. indirect methods

- Simpler questions, easier to answer, less sensitive to subjective biases, pertain to membership function only implicitly
- Single or multiple experts

Data-Driven Form data to fuzzy sets

CONSTRUCTING FUZZY SETS (4/5)

Direct Methods with Multiple Experts

Example

n experts were asked to validate the proposition " x belongs to A " as either true or false

True $a_i(x) = 1$

False $a_i(x) = 0$

where $i \in \{1 \cdots n\}$ denotes the i^{th} expert.

$$A(x) = \frac{1}{n} \sum_{i=1}^n a_i(x)$$

Can also distinguish degrees of competence c_i of individual experts:

$$A(x) = \sum_{i=1}^n c_i a_i(x), \quad \text{where} \quad \sum_{i=1}^n c_i = 1$$

CONSTRUCTING FUZZY SETS (5/5)

- Given 5 labourers {Q1, Q2, Q3, Q4, Q5}
- Need to determine membership function "**A**" that captures linguistic term "**Excellent Labourer**"
- Ask 10 superintendents if particular person is excellent labourer (*answer either yes (1) or no (0)*)
- For each labourer, calculate membership grade of belonging to fuzzy set "**A**" by taking ratio of total number of yes (1) to total number of responses.

	Q1	Q2	Q3	Q4	Q5
E#1	1	1	1	1	1
E#2	0	0	1	1	1
E#3	0	1	0	1	0
E#4	1	0	1	1	1
E#5	0	0	1	1	1
E#6	0	1	1	1	1
E#7	0	0	0	0	0
E#8	1	1	1	1	1
E#9	0	0	0	1	0
E#10	0	0	0	1	0

⇒ Opinions of individual experts must be aggregated

The resulting set would be: $A = 0.3/Q1 + 0.4/Q2 + 0.6/Q3 + 0.9/Q4 + 0.6/Q5$

FUZZY INFERENCE SYSTEMS (FIS)

MAMDANI ALGORITHM

- ▶ was introduced by Ebrahim (Abe) H. Mamdani in 1975
- ▶ works using rules of linguistics, style like human concepts
(more intuitive and easier to understand)
- ▶ creates a methodology to design control system
- ▶ well suited to applications where rules are inspired from human expert knowledge.

Task #1

Consider a fuzzy logic system with two inputs u , v and an output w . We suppose that each variable ranges from $0 \rightarrow 10$. w changes by a unit step. The membership functions of the fuzzy variables are described below.

► u can be:

Negative (N) $\mathcal{L}(2, 4)$

Zero (Z) $\Delta(3, 6, 9)$

Positive (PS) $\Gamma(6, 8)$.

► v can be:

Negative (N) $\mathcal{L}(2, 5)$

Zero (Z) $\Pi(2, 4, 6, 8)$

Positive (PS) $\Gamma(0, 8)$.

► w can be:

Small (S) $\mathcal{L}(2, 4)$

Medium (M) $\Delta(3, 5, 7)$

High (H) $\Gamma(6, 8)$.

Rule Base - case of \wedge

		u		
		N	Z	P
v	N	S	S	M
	Z	S	M	H
	P	M	H	H

Evaluate
 w if $u = 4$ & $v = 6$.

Task #2²

Design a fuzzy lighting controller system, in which the control system dims the bulb light automatically according to the environmental light. Assume that the inputs to the system are the environmental light x_1 and the changing rate of the environmental light x_2 . The output y represents the control value of the dimmer.

- x_1 ranges between 120 and 220 lumens. x_1 can be:

Dark (D) $\mathcal{L}(130, 150)$

Ambient (A) $\Pi(130, 150, 190, 210)$

Light (L) $\Gamma(190, 210)$.

- x_2 ranges between -10 and $+10$. x_2 can be:

Negative-Small (NS) $\mathcal{L}(-10, 0)$

Zero (Z) $\Delta(-10, 0, 10)$

Positive-Small (PS) $\Gamma(0, 10)$.

- y ranges between 0 and $+10$. dm can be:

Very-Small (VS) $\mathcal{L}(2, 4)$

Small (S) $\Delta(2, 4, 6)$

Big (B) $\Delta(4, 6, 8)$

Very-Big (VB) $\Gamma(6, 8)$.

Rule Base - case of \wedge

$x_2 \backslash x_1$	D	A	L
	D	A	L
NS	VB	B	B
Z	B	B	S
PS	B	S	VS

Evaluate
 y if $x_1 = 125$ & $x_2 = -6$.

²Credit: Dr. Mohammed A. T.

FUZZY INFERENCE SYSTEMS (FIS)

SUGENO ALGORITHM

Task #3

Suppose we have three fuzzy predicates: \mathcal{A} , \mathcal{B} and \mathcal{C} described by these trapezoidal fuzzy sets:

$$\mathcal{A} \quad \Pi(0, 2, 5, 9)$$

$$\mathcal{B} \quad \Pi(2, 8, 13, 16)$$

$$\mathcal{C} \quad \Pi(11, 16, 19, 19)$$

x and y are fuzzy variables, each one ranges between 0 and 19. Given the following three rules:

$$\mathcal{R}_1 \quad (x \text{ is } \mathcal{A}) \wedge (y \text{ is } \mathcal{C}) \rightarrow u = 10$$

$$\mathcal{R}_2 \quad \neg(x \text{ is } \mathcal{A}) \vee (y \text{ is } \mathcal{B}) \rightarrow u = 2$$

$$\mathcal{R}_3 \quad (x \text{ is } \mathcal{B}) \wedge \neg(y \text{ is } \mathcal{C}) \rightarrow u = 5$$

Compute the degree of satisfaction for each case:

$$\textcircled{1} \quad x_1 = 5 \ \& \ y_1 = 12 \qquad \textcircled{2} \quad x_2 = 0 \ \& \ y_2 = 15 \qquad \textcircled{3} \quad x_3 = 7 \ \& \ y_3 = 13$$

$$x_1 = 5 \& y_1 = 12$$

 \mathfrak{R}_1

$$\begin{aligned} \mu_{\mathcal{A}}(x_1) \min \mu_{\mathcal{C}}(y_1) \\ 1 \min 1/5 = 1/5 \end{aligned}$$

 \mathfrak{R}_2

$$\begin{aligned} \mu_{\mathcal{A}}(x_1) \max \mu_{\mathcal{B}}(y_1) \\ 0 \max 1 = 1 \end{aligned}$$

 \mathfrak{R}_3

$$\begin{aligned} \mu_{\mathcal{B}}(x_1) \min \mu_{\mathcal{C}}(y_1) \\ 1/2 \min 4/5 = 1/2 \end{aligned}$$

$$u_1 = 3.82$$

$$x_2 = 0 \& y_2 = 15$$

 \mathfrak{R}_1

$$\begin{aligned} \mu_{\mathcal{A}}(x_2) \min \mu_{\mathcal{C}}(y_2) \\ 0 \min _ = 0 \end{aligned}$$

 \mathfrak{R}_2

$$\begin{aligned} \mu_{\mathcal{A}}(x_2) \max \mu_{\mathcal{B}}(y_2) \\ 1 \max 1/3 = 1 \end{aligned}$$

 \mathfrak{R}_3

$$\begin{aligned} \mu_{\mathcal{B}}(x_2) \min \mu_{\mathcal{C}}(y_2) \\ 0 \min _ = 0 \end{aligned}$$

$$u_2 = 2$$

$$x_3 = 7 \& y_3 = 13$$

 \mathfrak{R}_1

$$\begin{aligned} \mu_{\mathcal{A}}(x_3) \min \mu_{\mathcal{C}}(y_3) \\ 1/2 \min 2/5 = 2/5 \end{aligned}$$

 \mathfrak{R}_2

$$\begin{aligned} \mu_{\mathcal{A}}(x_3) \max \mu_{\mathcal{B}}(y_3) \\ 1/2 \max 1 = 1 \end{aligned}$$

 \mathfrak{R}_3

$$\begin{aligned} \mu_{\mathcal{B}}(x_3) \min \mu_{\mathcal{C}}(y_3) \\ 5/6 \min 3/5 = 3/5 \end{aligned}$$

$$u_3 = 4.5$$

MULTIVARIATE CHAIN RULE

Output layer \rightarrow hidden layer #2

$$\frac{\partial \hat{y}_l}{\partial w_{l,k}^{[3]}} = \underbrace{\frac{\partial \hat{y}_l}{\partial z_l^{[3]}}}_{\dot{f}_3(z_l^{[3]})} \underbrace{\frac{\partial z_l^{[3]}}{\partial w_{l,k}^{[3]}}}_{a_k^{[2]}}$$

Output layer \rightarrow hidden layer #1

$$\frac{\partial \hat{y}_l}{\partial w_{k,j}^{[2]}} = \underbrace{\frac{\partial \hat{y}_l}{\partial z_l^{[3]}}}_{\dot{f}_3(z_l^{[3]})} \underbrace{\frac{\partial z_l^{[3]}}{\partial a_k^{[2]}}}_{w_{l,k}^{[3]}} \underbrace{\frac{\partial a_k^{[2]}}{\partial z_k^{[2]}}}_{\dot{f}_2(z_k^{[2]})} \underbrace{\frac{\partial z_k^{[2]}}{\partial w_{k,j}^{[2]}}}_{a_j^{[1]}}$$

Output layer \rightarrow input layer

$$\frac{\partial \hat{y}_l}{\partial w_{j,i}^{[1]}} = \underbrace{\frac{\partial \hat{y}_l}{\partial z_l^{[3]}}}_{\dot{f}_3(z_l^{[3]})} \underbrace{\frac{\partial z_l^{[3]}}{\partial a_k^{[2]}}}_{w_{l,k}^{[3]}} \underbrace{\frac{\partial a_k^{[2]}}{\partial z_k^{[2]}}}_{\dot{f}_2(z_k^{[2]})} \underbrace{\frac{\partial z_k^{[2]}}{\partial a_j^{[1]}}}_{w_{k,j}^{[2]}} \underbrace{\frac{\partial a_j^{[1]}}{\partial z_j^{[1]}}}_{\dot{f}_1(z_j^{[1]})} \underbrace{\frac{\partial z_j^{[1]}}{\partial w_{j,i}^{[1]}}}_{x_i}$$

LIST OF AVAILABLE OPTIMIZERS (1/2)

Here is a list of some common optimizers for artificial neural networks:

$$\Delta \hat{\mathcal{W}} \triangleq \mathcal{F} \left(\underbrace{\nabla \mathcal{J}(\hat{\mathcal{W}})}_{\text{Loss Function}} \right) \equiv \hat{\mathcal{W}} \triangleq \hat{\mathcal{W}} + \mathcal{F}(\nabla \mathcal{J}(\hat{\mathcal{W}})) \quad \nabla \mathcal{J}(\hat{\mathcal{W}}) = \begin{bmatrix} \frac{\partial \mathcal{J}}{\partial \hat{w}_0} \\ \vdots \\ \frac{\partial \mathcal{J}}{\partial \hat{w}_n} \end{bmatrix}$$

Stochastic Gradient Descent (SGD)

$$\hat{\mathcal{W}} \triangleq \hat{\mathcal{W}} - \eta \nabla \mathcal{J}(\hat{\mathcal{W}})$$

Mini-batch Gradient Descent

$$\hat{\mathcal{W}} \triangleq \hat{\mathcal{W}} - \frac{\eta}{m} \nabla \sum_{i=1}^m \mathcal{J}(\hat{\mathcal{W}}) \quad \longleftarrow m \text{ denotes the size of the mini-batch}$$

Momentum

$$\hat{\mathcal{W}} \triangleq \hat{\mathcal{W}} - \mathcal{V}, \quad \text{where} \quad \mathcal{V} \triangleq \alpha \mathcal{V} + \eta \nabla \mathcal{J}(\hat{\mathcal{W}})$$

Nesterov Accelerated Gradient (NAG)

$$\hat{\mathcal{W}} \triangleq \hat{\mathcal{W}} - \mathcal{V} \quad \text{where} \quad \mathcal{V} \triangleq \alpha \mathcal{V} + \eta \nabla \mathcal{J}(\hat{\mathcal{W}} - \alpha \mathcal{V})$$

LIST OF AVAILABLE OPTIMIZERS (2/2)

AdaGrad

$$\hat{\mathcal{W}} \triangleq \mathcal{W} - \frac{\eta}{\sqrt{\mathcal{G} + \epsilon}} \nabla \mathcal{J}(\mathcal{W}) \quad \text{where} \quad \mathcal{G} \triangleq \mathcal{G} + \left(\nabla \mathcal{J}(\mathcal{W}) \right)^2$$

RMSProp

$$\hat{\mathcal{W}} \triangleq \mathcal{W} - \frac{\eta}{\sqrt{\mathcal{G} + \epsilon}} \nabla \mathcal{J}(\mathcal{W}) \quad \text{where} \quad \mathcal{G} \triangleq \mathcal{G} + (1 - \beta) \left(\nabla \mathcal{J}(\mathcal{W}) \right)^2$$

Adam

$$\begin{aligned} \mathcal{M} &\triangleq \beta_1 \mathcal{M} + (1 - \beta_1) \nabla \mathcal{J}(\mathcal{W}) && \longleftarrow \text{Estimate of first moment} \\ \mathcal{V} &\triangleq \beta_2 \mathcal{V} + (1 - \beta_2) \left(\nabla \mathcal{J}(\mathcal{W}) \right)^2 && \longleftarrow \text{Estimate of second moment} \\ \hat{\mathcal{M}} &= \frac{\mathcal{M}}{1 - \beta_1^k} && \longleftarrow \text{@ every } k^{\text{th}} \text{ iteration} \\ \hat{\mathcal{V}} &= \frac{\mathcal{V}}{1 - \beta_2^k} && \longleftarrow \text{@ every } k^{\text{th}} \text{ iteration} \\ \hat{\mathcal{W}} &\triangleq \mathcal{W} - \frac{\eta}{\sqrt{\hat{\mathcal{V}} + \epsilon}} \hat{\mathcal{M}} \end{aligned}$$
